EXAMINER HUYNH, THU V				
ART UNIT 2178		PAPER NUMBER		
NOTIFICATION DATE 05/15/2009		DELIVERY MODE ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

PATDOCTC@fr.com

Office Action Summary

Application No.

10/750,180

Applicant(s)

MITTAL, VIBHU

Examiner

THU V. HUYNH

Art Unit

2178

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 March 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This action is responsive to communications: RCE filed on 3/06/09 to application filed on 12/31/03.
2. Claims 1-30 are pending in the case. Claims 1, 11 and 20 are independent claims.
3. All rejections in the previous office action have been withdrawn as necessitated by the amendment.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 1-5, 8-14, 17-23 and 26-30 are rejected under 35 U.S.C. 103(a) as being Unpatentable over Goodisman et al., US 2002/0069223 A1, published 06/06/02 in view of Golovchinsky et al., US 2004/0078757, filed 08/31/2001.**

Regarding independent claim 1, Goodisman teaches the steps of:

- locating a text reference in a source document (Goodisman, [0052], [0053], parsing a document into text blocks, wherein a text block includes one or more object);
- identifying a target document relating to the text reference (Goodisman, [0039], [0052], [0053], [0059]; identifying a target document related to the text block that includes the object);

- deriving an anchor text corresponding to the target document utilizing the source using the located text reference (Goodisman, fig.6; [0053], [0056]; obtaining and modifying the label to a highlighted/underlined hyperlink, such as highlighted/underlined name “JohnSmith” hyperlink in the document; linking the highlighted/underlined text reference to the target document when the hyperlink is activated/selected);
- generating a hyperlink to the target document (Goodisman, [0053], [0056], [0059]; selecting/clicking the object causing retrieving and displaying the target document); and
- associated the hyperlink with the anchor text (Goodisman, [0053], [0056]; automatically associating the hyperlink with the name “JohnSmith” by linkify engine so that selecting/clicking the name “JohnSmith” causing retrieving and displaying the target document).

Goodisman does not teach identifying a target document including performing a search based on a query derived from the text reference using a search engine and selecting the target document from one or more search results.

Golovchinsky teaches identifying a target document relating to text reference including performing a search based on a query derived from the text reference using a search engine and selecting the target document from one or more search results (Golovchinsky, [0018], [0067]; searching for document (target document) containing references (text reference) to other documents)

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Golovchinsky's teaching and Goodisman's teaching to include a search engine to identify a document relating to the text reference, since the combination would have searched and provided related documents associated with the hyperlink to the user.

Regarding claim 2, which is dependent on claim 1, Goodisman teaches deriving the text reference based on a statistical model of at least one of the text formatting and lexical cues (Goodisman, [0053]; parsing the document based on the type of the input document).

Regarding claim 3, which is dependent on claim 1, Goodisman teaches comparing text from the source document with a list of predetermined references (Goodisman, [0053]; pattern matcher includes "linguistic, keyword proximity and word sequence analysis" to identify a name).

Regarding claim 4, which is dependent on claim 1, Goodisman teaches locating a label corresponding to the text reference and associating the hyperlink with the label (Goodisman, fig.6; [0052], [0053], [0056]; locating/establishing a label, such as name "JohnSmith", as an object for the text block).

Regarding claim 5, which is dependent on claim 4, Goodisman teaches deriving the label based on a statistical model of at least one of text formatting and lexical cues (Goodisman,

[0053]; obtaining the label, such as name, phone number, social security number based on “linguistic, keyword proximity and word sequence analysis”).

Regarding claim 8, which is dependent on claim 1, Goodisman teaches parsing the text reference into a plurality pieces of text, wherein the identifying, deriving, generating, and associating are performed for each of the plurality pieces of text (Goodisman; fig.6; [0024],[0053]; wherein the text block is a sentence that has two objects so that two hyperlinks are generated as in fig.6).

Regarding claim 9, which is dependent on claim 1, Goodisman teaches wherein the source document is selected from the group consisting of an HTML document, a text document, a postscript document, a Portable Document Format (PDF) document, a PowerPoint document, a Word document, and Excel document and a close-captioned video (Goodisman, [0030],[0050]).

Regarding claim 10, which is dependent on claim 1, Goodisman teaches the text reference is reference to one of a paper, article, company, institution, product, search engine, image, object, and geographical location (Goodisman; [0053]; the text block includes an object)

Claims 11-14 and 17-19 are for a computer system including a program in a storage device performing the method of claims 1-5, 8-10, respectively and are rejected under the same rationale.

Claims 20-23 and 26-28 are for a computer readable medium including instructions performing the method of claims 1-5, 8-10, respectively and are rejected under the same rationale.

Regarding claim 29, which is dependent on claim 1, Golovchinsky teaches performing the search using a search term, the search term being determined based on the text reference (Golovchinsky, [0071]).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Golovchinsky's teaching and Goodisman's teaching to include a search engine, since the combination would have searched and provided related documents associated with an anchor text to the user.

Regarding claim 30, which is dependent on claim 1, determining the target document according to a rating determined by the search engine ((Golovchinsky, [0071]).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Golovchinsky's teaching and Goodisman's teaching to include a search engine, since the combination would have searched and provided related documents associated with an anchor text to the user based on ranking or filtering.

6. Claims 6, 15 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goodisman and Golovchinsky as applied to claim 4 above and further in view of Glover et al., US 2003/0221163 A1, filed 02/03.

Regarding claim 6, which is dependent on claim 4, Goodisman does not explicitly teach deriving a label anchor text depending on whether the label corresponding to the text reference precedes or follows a text phrase.

Glover teaches deriving a label anchor text depending on whether the label corresponding to the text reference precedes or follows a text phrase (Glover, figures 4; [0034]; extended anchortext (410, 414, 418) are extracted including text references before, after or before and after label “Yahoo”).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Glover’s teaching and Goodisman’s teaching to extract text before, after or surround the label, since the combination would have provided label anchor text including the label and text surround the label to link to a target document.

Claim 15 is for a computer system performing the method of claim 6 is rejected under the same rationale.

Claim 24 is for a computer readable medium including instructions performing the method of claim 6 is rejected under the same rationale.

7. **Claims 7, 16 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goodisman, Golovchinsky and Glover as applied to claim 6 above and further in view of Hennings et al., US 6,763,496 B1, filed 03/31/99.**

Regarding claim 7, which is dependent on claim 6, Goodisman does not explicitly teaches the label anchor text is a longest noun phrase extracted from the text phrase following or preceding the label when the label precedes or follows the phrase, respectively.

Hennings teaches anchor text link comprising a phrase, a picture icon, or a phrase and an icon (Hennings, col.2, lines 54-65).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined Hennings' teaching into Goodisman and Glover's teaching to extract a phrase before, after the label, since the combination would have provided label anchor text including a phrase before or after the label; or combination of a phrase before or after the label and an the label (object such as icon, image, trademark, identifier).

Claim 16 is for a computer system performing the method of claim 6 is rejected under the same rationale.

Claim 25 is for a computer readable medium including instructions performing the method of claim 6 is rejected under the same rationale.

Response to Arguments

10. Applicant's arguments with respect to claims 1-5, 8-14, 17-23 and 26-28 have been considered but are not persuasive.

Applicants primarily argue with respect to claims independent claims 1, 11, 20, 29-30 that "Goodisman discloses that a search of the content of the known target documents referenced by the anchors can be performed However, these searches are not to identify any target

documents” Applicants further argue that the “search is based on the target documents and not on the text reference in the source document”(Remarks, pages 10-11).

This is not persuasive. Goodman teaches searching for documents (target documents) containing references (text reference) to particular documents (Golovchinsky, [0018]). This indicates that the searched documents are based on the text reference as well as particular documents (Golovchinsky, fig.6A; [0067], annotated anchors 601 is text) and the search documents are document relating to the text reference (target document). Therefore, Golovchinsky’s teaching is combined with Goodman’s teaching to identify documents relating to the text reference (target document) using a search engine to provide to a user.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to THU V. HUYNH whose telephone number is (571)272-4126. The examiner can normally be reached on Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Stephen S. Hong can be reached on (571) 272-4124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
